

Setup your Eudora 5.1 (Light Mode) client

* Replace yourdomain.com with your actual domain name in all instructions below

1. Open Eudora.
2. Click **Tools > Options**.
3. Click **Getting Started** from the **Category** list.
 - Enter your full name in the **Real name** field.
 - Enter your full Mail email address (username@yourdomain.com) in the **Return address** field.
 - Enter mail.yourdomain.com in the **Mail Server (Incoming)** field.
 - Enter your Mail username (username@yourdomain.com) in the **Login Name** field.
 - Set the **SMTP Server (Outgoing)** to mail.yourdomain.com and select **Allow authentication**.
4. Select **Checking Mail** from the **Category** list.
 - Your information should be pre-populated based on your **Getting Started** settings.
5. Select **Incoming Mail** from the **Category** list.
 - Ensure that the **Leave mail on server** and **Skip messages over 40K in size** options are **not** ticked.
 - Select **Passwords** for **Authentication Style**.
6. Select **Sending Mail** from the **Category** list.
 - Tick the box next to **Allow authentication**.
7. Click **OK** and then verify your settings by clicking **File > Check Mail**.

Congratulations! You've finished configuring your client to send and retrieve Mail messages.
